Education

McMaster University | B.A.Sc.

Computer Science and Economics

Hamilton, Canada

Sept. 2024 – Apr. 2028 (Expected)

- **GPA:** 3.4 / 4.0
- **Relevant Coursework:** Computer Architecture, Data Structures and Algorithms, Development Basics

Skills

Systems & Support: Linux, CLI tools, system monitoring, log/metrics analysis, troubleshooting, root cause analysis, documentation

Programming: Python, C, Java, Haskell, TypeScript, PHP, html, AJAX, Flask, Go

Databases: SQL, MySQL, data validation, CRUD operations, Dbeaver

Tools: Git, GitHub, VS Code, Jupyter, XAMPP

Professional: prioritization, incident ownership, stakeholder communication, time management, compartmentalization

Experience

Data Handling Intern

Feb 2022 – Oct 2022

Coolways Conditioning

- Triaged and resolved data inconsistencies and system issues impacting reporting and operational workflows; documented fixes for repeatability.
- Supported ongoing maintenance of datasets and reporting artifacts; improved reliability through validation and corrective updates.
- Collaborated with non-technical stakeholders to clarify requirements and prioritize support tasks based on operational impact.

Volunteer Teacher

Aug 2022 – Feb 2023

AAYAM

- Managed schedules and deliverables across multiple groups; improved consistency through structured lesson workflows.
- Strengthened communication by translating complex topics into clear, actionable steps for learners.

Projects

System Monitor CLI Tool (C, Linux)

- Built a modular Linux CLI utility to collect CPU/memory metrics and export structured logs to CSV for analysis.
- Implemented robust error handling and input validation to ensure stable execution under varying system states.
- Designed components for extensibility (separate modules for sampling, formatting, and persistence).

Secure Password Manager (Python)

- Developed a secure CLI application for credential management with encryption and verification to protect sensitive data.
- Applied defensive programming practices to prevent invalid states and improve data integrity.

Personal Portfolio Web Application (PHP, SQL, AJAX)

- Built and deployed a data-driven web application with authentication, CRUD workflows, and SQL-backed storage.
- Designed relational tables and queries; validated inputs to maintain consistency across application layers.

Intent Classification Chatbot (Python, HTML, Flask, NLTK)

- Implemented intent classification and keyword-based routing to automate responses and improve user support workflows.
